$$[\ \textit{one-set}(1,4,7),\ \textit{dc-set}(3,6)\ ]$$
$$[\ \textit{zero-set}(0,2,5),\ \textit{dc-set}(3,6)\ ]$$

COMPOSITION OF SWITCHING FUNCTIONS

$$\begin{aligned}
\mathrm{AND}(x_3, x_2, x_1, x_0) &= \mathrm{AND}(\mathrm{AND}(x_3, x_2), \mathrm{AND}(x_1, x_0)) \\
\mathrm{XOR}(x_1, x_0) &= \mathrm{OR}(\mathrm{AND}(\mathrm{NOT}(x_0), x_1), \mathrm{AND}(x_0, \mathrm{NOT}(x_1))) \\

&\qquad \mathrm{AND}(x_3, x_1, x_0), \mathrm{AND}(x_2, x_1, x_0))
\end{aligned}$$

SWITCHING EXPRESSIONS

1. Symbols 0 and 1 are SEs.
2. A symbol representing a binary variable is a SE.
3. If A and B are SEs, then
   - $(A)'$ is a SE. This is referred to as "A complement." Sometimes we use $\overline{A}$ to denote complementation.
   - $(A) + (B)$ is a SE. This is referred as "A OR B"; it is also called "A plus B" or "sum" due to the similarity with the corresponding arithmetic symbol.
   - $(A) \cdot (B)$ is a SE. This is referred to as "A AND B"; it is also called "A times B" or "product" due to the similarity with the corresponding arithmetic symbol.

PRECEDENCE RULES: $'$ PRECEDES $\cdot$ WHICH PRECEDES $+$

WELL-FORMED SWITCHING EXPRESSIONS ARE:

$$x_0 \qquad x_1 + x_2 x_3' \qquad 1 + 0(x + y)$$

$(x_1 + {}'x_2 +)x_3$ AND

"THIS IS A SWITCHING EXPRESSION"

ARE NOT WELL-FORMED SWITCHING EXPRESSIONS.

SWITCHING ALGEBRA AND EXPRESSION EVALUATION

$+$	0	1
0	0	1

1	0	1

$'$

$$E(x_2, x_1, x_0) = x_2 + x_2' x_1 + x_1 x_0'$$

CONVERSION AMONG CANONICAL FORMS

SUM OF MINTERMS $\longleftrightarrow$ *one-set*
PRODUCT OF MAXTERMS $\longleftrightarrow$ *zero-set*
$\Rightarrow$ CONVERSION STRAIGHTFORWARD

$$\sum m(\{j \mid f(j) = 1\}) = \prod M(\{j \mid f(j) = 0\})$$

EXAMPLE:

m-NOTATION:

$$f(x, y, z) = \sum m(0, 4, 7)$$

M-NOTATION:

$$f(x, y, z) = \prod M(1, 2, 3, 5, 6)$$
